TI Human cDNA sequences and their encoded proteins and diagnostic and therapeutic uses

SO PCT Int. Appl., 491 pp.
CODEN: PIXXD2

AB Disclosed herein are 62 cDNA sequences that encode novel human polypeptides that are members of the following protein families: trypsin, germline oligomeric matrix protein, neuromedin U25, caldecrin, neural cell adhesion protein, ADAMTS 12, CASPR4, ADAMS-TS3, gliacolin, aminopeptidase N, adiponectin, trypsin III, tissue kallikrein, .beta.-transforming growth factor, diphthamide synthesis protein, WECHE lungkine, ADAM-TS7, palmitoyl-protein thioesterase-2I, betacellulin, small inducible cytokine A23, granulocyte colony-stimulating factor, platelet basic protein 2, brain natriuretic peptide, serine protease, acyl-CoA-binding protein, elastase IV, collagen, viral receptor, and cathepsin L2. Also disclosed are polypeptides encoded by these nucleic acid sequences, and antibodies, which immunospecifically-bind to the polypeptide, as well as derivs., variants, mutants, or fragments of the aforementioned polypeptide, polynucleotide, or antibody. The invention further discloses therapeutic, diagnostic and research methods for diagnosis, treatment, and prevention of disorders involving any one of these novel human nucleic acids and proteins.

TI Broad spectrum chemokine antagonist protein from molluscum contagiosum
virus, and therapeutic use
SO PCT Int. Appl., 41 pp.
CODEN: PIXXD2
AB The invention relates to a purified protein that antagonizes the ability
of chemokines (CC and CXC) to attract leukocytes (monocytes, lymphocytes,
and neutrophils), and it's use as an anti-inflammatory and antiviral
agent. A method for treating a chemokine-related immunopathol. disorder
in a subject by administering a therapeutically effective amt. of an
anti-inflammatory protein, MCVCC, encoded by the molluscum contagiosum
virus (MCV) gene MC148 (genome location from about base-pair 166,992 to
base-pair 167,303 of MCV, or a biol. active fragment thereof) is provided.
A method for treating a subject having or at risk of having an HIV
infection or disorder by administering a therapeutically effective amt. of
this anti-inflammatory protein is also provided. A pharmaceutical compn.
contg. at least one dose of an anti-inflammatory protein having the amino
acid sequence of a protein encoded by the MCV genome from about base-pair
166,992 to base-pair 167,303, or a biol. active fragment thereof, in a
therapeutically acceptable carrier, is also provided.

TI Recombinant **antimicrobial** peptides thrombocidin-1 (TC-1) and
 thrombocidin-2 (TC-2) isolated from human blood platelets

SO PCT Int. Appl., 38 pp.
 CODEN: PIXXD2

AB The present invention relates to isolated and recombinant
antimicrobial peptides thrombocidin-1 (TC-1) and thrombocidin-2
 (TC-2), or variants thereof, which comprise at least in part the sequence
 as shown in figure 1 indicated by the label TC-1 and TC-2, and have
antimicrobial activity against gram-pos. and gram-neg.
bacteria, for example Escherichia coli, Bacillus subtilis,
 Streptococcus sanguis, Streptococcus pneumoniae, Staphylococcus epidermis,
 and Staphylococcus aureus, and/or against **fungi**, for example
 Candida albicans, C. glabrata, Cryptococcus neoformans, Aspergillus
 flavus, A. fumigatus, and Pseudoallescheria spec. The invention further
 relates to the use of said peptides, or variants thereof, for the prepn.
 of a medicament for the treatment of bacterial or **fungal**
 infections, such as endocarditis, in human and animals and the use of said
 peptides, or variants thereof, in release systems for prevention of
 bacterial or **fungal** infections in human and animals.

TI Purification of proteins employing connective tissue activating peptide
III (CTAP-III) fusions

SO PCT Int. Appl., 83 pp.
CODEN: PIXXD2

AB A method for producing a heterologous protein with a microorganism
comprises producing a fusion protein contg. connective tissue activating
peptide III (CTAP-III), cleaving the fusion protein to produce CTAP-III
and a 2nd protein, and sepn. of the two proteins by ion exchange
chromatog. The CTAP-III and 2nd protein have different pIs, e.g. the pI
value of the 2nd protein is <6.5 or >8.5. CTAP-III-hirudin,
CTAP-III-laminin B1 peptide, and CTAP-III-platelet factor 4 fusion
proteins were produced with Escherichia coli, the fusion proteins were
cleaved with CNBr, and the peptides isolated and purified by e.g. anion
exchange chromatog.

TI Novel polypeptides and nucleic acids encoding same
AB The present invention provides novel isolated NOVX polynucleotides and polypeptides encoded by the NOVX polynucleotides. Also provided are the antibodies that immunospecifically bind to a NOVX polypeptide or any derivative, variant, mutant or fragment of the NOVX polypeptide, polynucleotide or antibody. The invention additionally provides methods in which the NOVX polypeptide, polynucleotide and antibody are utilized in the detection and treatment of a broad range of pathological states, as well as to other uses.

TI DNA encoding leukocyte derived growth factor-2 (LDGF-2)
AB A protein, Leukocyte Derived Growth Factor 2 (hereinafter LDGF2) having PDGF-like activity is described. LDGF2 reacts with PDGF receptors and possesses mitogenic and/or chemotactic activity for various cell types, particularly connective tissue cells. LDGF2 may be used as the active ingredient in therapeutic compositions, e.g. wound healing compositions, or even further may be used as an additive to cell culture media for the purpose of stimulating cell growth. The protein has a molecular weight of about 7000 daltons determined by SDS gel electrophoresis and is about 61 amino acids in length.

TI Compositions comprising leukocyte-derived growth factors and methods of administering same to facilitate wound healing
AB A gene encoding a leukocyte-derived growth factor (LDGF) has been isolated, cloned and sequenced. LDGF is believed to correspond to a PDGF-like monocyte-derived growth factor with chemotactic activity which is found in human wound fluid. Protease-resistant and other analogues of LDGF, as well as recombinant LDGF of native amino acid sequence, may now be produced by gene expression in transformed hosts.

expression
AB A method for obtaining heterologous peptides from fusion proteins
wherein at least one of the fusion components is connective
tissue-activating peptide-III is provided. Hirudin, a laminin B.sub.1
peptide and platelet factor 4 are polypeptides expressed using this
method. DNA sequences encoding the fusion protein, vectors containing
these sequences and transformed prokaryotic hosts useful in practicing
the method of the present invention are also provided.

TI Recombinant materials and methods for producing human connective tissue-activating peptide-III and analogs thereof

AB A synthetic structural gene encoding CTAP-III or CTAP-III-Leu21 including adaptors for the carboxy and amino terminal ends of the gene which contain start and stop codons and convenient restriction sites for use in cloning the gene is described. The gene was designed for efficient expression in **bacteria** and to include two unique restriction sites for BamHI and XbaI. Plasmid expression vectors that are derivatives of pBR322 that contain a ColE1 insert which includes the expression control sequence and structural gene for colicin are also described. Constructs for expressing CTAP-III, CTAP-III-Leu21, CTAP-III or CTAP-III-Leu21 having a nonpolar pentapeptide fused to its amino terminus, and fusion proteins of such CTAP-III proteins and a colicin fragment are prepared by inserting the synthetic structural gene into the vectors at positions in phase with the colicin expression control sequence and under the control thereof.
